COUNTER

# INFORM COUNTER

*For service-oriented libraries*

The Inform counter fits the new generation of service-oriented libraries as it meets the needs of a modern space in the information age: it is a place created by people for people.

Inform is a modular piece of furniture. Straight and curved elements can be used as freestanding counters or randomly combined. The design of the table tops and side panels creates a continuous surrounding frame which unites the single elements into an expressive optical unit. The counter is available in two heights; 740 and 1000 mm as well as a height adjustable module. The counter is also suitable for use with RFID systems upon special request.

## RECTANGULAR AND CURVED

The rectangular, 45° curved and 90° curved elements can be used as a single, freestanding counter or be combined in a number of ways to create the counter specifically for your needs.

Our Inform counter is informative - the integrated storage and display modules ensure numerous options of presenting various medias. The corner display unit enable an organized presentation of event tips, and presentation cabinets show the new acquisitions. Furthermore, various accessories such as info signs, counter top parts, book and bag shelves and decorative boards add functionalities and information points to the counter.

## RECESSED FRONT

Combine the standard rectangular or curved counter with a module with recessed front. The design allows for easy access on both sides of the counter and is also suited for wheelchair use.

The front panel is placed 30 cm from the front of the counter.

## HEIGHT ADJUSTABLE COUNTER

---

The height adjustable counter is a double construction with a moveable upper part and a fixed lower part. The moveable part of the counter slides along the walls of the fixed parts excluding possible safety risks.

With the electrical driven height adjustable counter, you can adjust your working height ranging between 680 mm and 1180 mm.

## INFO TABLE

Inform Info table enlarges your work area with a short table element. It provides you with an open and informal space to interact with the library users.

Choose between info table with foot or with panel.

## CORNER COUNTER

The corner counter combines two rectangular elements with a square or triangular corner counter.

You can also choose to add a display unit in the corner.

## DISPLAY AND STORAGE

There are different options for adding display and storage solutions to the Inform counter.

They include corner display units and display cabinets with display on the front and storage at the back.

## FUNCTIONS

Add functions to the Inform counter to make it more functional and user friendly.

Functions include counter shelves, bag shelves, counter top parts, info signs, decorative boards and stickers on front panels.

## FACTS

### Product details

The Inform counter is easily recognized by its 40 mm thick panels, creating a continuous frame around the counter. The counter can be used as freestanding or randomly combined, with straight and curved elements, in two heights (740 and 1000 mm) as well as height adjustable, allowing for several combinations.
